

PREPAID BATTERY RECYCLING PROGRAM ORDER FORM PROGRAM FEATURES:

- Containers that have the *maximum capacity* to hold up to **30 pounds** (small box) or **70 pounds** (large box) of batteries.
- The convenience of one price, which includes the cost of the containers, recycling and UPS transportation.
- UPS transportation is included from any of the contiguous United States, as well as Hawaii, Alaska, Puerto Rico and Canada.
- Packages to be used only for consumer sealed cell dry batteries.

Use of this program is subject to the individual state laws governing transportation and handling of these materials.

For larger shipments of spent batteries or information on recycling of other types of batteries call the INMETCO Sales Department @ (724) 758-2800.

PLEASE RETAIN A COPY OF THIS ORDER FORM FOR YOUR RECEIPT

To guard against possible fire, it is imperative that the collector/shipper of the batteries take one or more of the following precautions to prevent the batteries from short-circuiting:

- Place plastic non-conductive electrical tape over the terminals.
- Package the batteries in a manner that will prevent the terminals from contacting other batteries or metal surfaces during storage or transport.
- Place the batteries in plastic bags: If this option is used, each battery should be placed in a separate plastic bag so the terminals will not come in contact with other batteries or metal during storage or transport.
- Discharge Cells: Only a knowledgeable engineer or technician should do this. Consult your battery supplier for instruction on how to discharge cells completely and properly.
